

Compression strength (b bits / sparsity s)

Lemma 1: $\leq \kappa_q 2^{-b}$

Parameter perturbation $\Delta\theta$

Thm. 1: $\times \Lambda$

Gradient perturbation Δg

Thm. 2: pooling damps

Explanation perturbation $\Delta\varphi$

Thm. 4: $1 - \kappa 4^{-b}$

Loss of fidelity $1 - \mathcal{F}(b)$

EAQ: spend bits where ω_l is large
